

To Bruce Bolden
From Garrett Workman
Subject Summary of personal sprint 4 work

Introduction

For this sprint I Finished the Save and Export functions getting them to work properly with all of the changes made by other group members.

Summary

I had to change how some parts of the save function worked to get it to work properly with any other changes before committing the final changes. I also added hotkey commands for the save functions (Control + S to save and Control + E to export).

Appendix

For this final spring i was hoping to add in the Undo Framework to allow for the user to undo and redo action's while editing their project but this turned into more research and work than I had time for in this final spring.
