Subject Fourth development sprint for Goofy Lights Editor - Team 1

Introduction

This document provides my efforts for the Goofy Lights Editor final sprint.

Overview

Goofy Lights Editor team project fourth development.

Summary

Updated the design document for the grid class. Added sample class and sequence diagram for creating grid. Worked on the grid class for selecting the smaller grid using the shift key. Default tower grid is shown in gray color. When user presses shift key and clicks on row then those cells will be turned as tower grid. Explored on ShiftModifier in Qt for adding this functionality.
