From   Tim Clemans
Subject Team Project: Sprint 3
Team   Team 1

Introduction

A short summary of the work I did during the third Sprint for Team 1's Goofy-Lights-Editor.

Summary

Max already added the default Qt ColorPicker widget, and made it so the window resized properly, which left me with adding tooltips to the various buttons. I also spent some time trying to merge our various branches into one. I mostly succeeded, all accept one branch, due to some merge conflicts. But I believe it's been resolved. I also added the Edit section to the File bar and added a spot for Hotkeys. I feel like the UI is essentially done, next I'd like to work on the Documentation and help add some functionality.
